We have resources to help you with your winter energy bills.

Using more natural gas during the winter to stay warm may mean an increase in your energy bill. With you in mind, CenterPoint Energy offers resources that can help you manage your natural gas costs this winter.

CenterPointEnergy.com/PaymentAssistance for help locating your local community resource agency.

240105_06

These energy-saving tips can help you save money while cutting your energy use!

Install efficient showerheads.

Efficient showerheads, with flow rates no greater than two gallons per minute, help reduce hot water use while maintaining water pressure.

Insulate water heater pipes.

Once your pipes are insulated, you can lower your water heater temperature to save energy. You also won't have to wait as long for hot water to reach the faucet or showerhead.

Block drafts of cold air around your doors.

As an alternative to installing more permanent weatherstripping, roll up towels and push them against the bottom of exterior doors during the colder months to block the outside air and prevent heat loss.

Visit **CenterPointEnergy.com/EnergySavingTips** for more tips.

240105_08

Know the signs and stay safe around carbon monoxide!

Carbon monoxide (CO) safety is crucial because CO is a colorless, odorless gas that can be deadly when inhaled in high concentrations.

Symptoms of exposure: Exposure to carbon monoxide can lead to symptoms such as headaches, dizziness, nausea, confusion and even loss of consciousness. Prolonged exposure can be fatal.

Early warning devices: Install and/or test the carbon monoxide detectors in your home. These devices can alert you to the presence of carbon monoxide before it reaches dangerous levels.

Ventilation: Make sure all combustion appliances are adequately maintained and properly vented according to manufacturer's specifications. This includes gas stoves, fireplaces, furnaces and water heaters.

Learn more at **CenterPointEnergy.com/COSafety**.

February, 2024

Building on our commitment to a cleaner energy future

CenterPoint Energy is among the first energy delivery companies to make an emissions-reduction commitment across a multi-state footprint. We are doing this by using advanced technologies such as:

- **Picarro**, a methane-leak detection technology that allows us to proactively make repairs that reduce emissions.
- **Improved leak-resistant pipelines** to replace cast-iron and bare steel pipe.
- **Zero Emission Vacuum and Compressor (ZEVAC)**, an air-powered technology that avoids emissions by capturing and reusing methane during pipeline maintenance or inspection.

Learn more at
[CenterPointEnergy.com/Sustainability](https://www.CenterPointEnergy.com/Sustainability).

240105_12

In 2024, we are focusing on:

Modernizing our infrastructure
We are modernizing our infrastructure to better prepare for the future of energy.

Improved reliability
Throughout our operations we are taking steps to proactively upgrade, like installing new smart meters, to improve sustainability and reliability across our six-state service territories.

Safety
We understand the profound responsibility that comes with providing essential energy services, and we are dedicated to maintaining the highest standards to keep you and our employees safe.

At CenterPoint Energy, we remain dedicated to delivering the service our communities depend on safely and reliably.

240105_15

A safety message from CenterPoint Energy

If you smell natural gas, leave immediately. Call our Gas Leak Hotline at 800-296-9815. Do not use or store flammable products such as gasoline in the same room or area near the water heater or any other gas appliance.

Si percibes un olor a gas natural, sal inmediatamente. Llama a nuestra línea telefónica para fugas de gas a uno de los números de teléfono que aparecen arriba. No use ni almacene productos inflamables tales como gasolina en la misma habitación o en áreas cercanas a un calentador de agua u otro tipo de aparato a gas.

How to read your meter

The following is an example of how to read a typical meter index.

Look at the four dials with their curved arrows. Read from right to left as follows:

1. Read the "thousand-foot" dial as 7, the last number that the pointer passed. Note that the curved arrow on the dial shows a clockwise movement of the pointer.
2. Read the next dial, the "10-thousand" dial. The curved arrow on the dial above shows a

counterclockwise direction. The pointer is near the 9, but to be sure whether to read it as that number or the lower number 8, the previously mentioned "same or lower number rule" must be applied. Since the pointer in the "thousand-foot" dial to the right is nearer the 8 and the pointer has not reached the 0, the "10-thousand" dial should be read as 8.

3. Read the "100-thousand" dial, it seems to point to 2. Double-check by using the rule above. Since the pointer of the "10-thousand" dial is between 8 and 9, take the lower reading number, 1, for the "100-thousand" dial.

4. Read the left-most dial, the "million-foot" dial. The pointer is near the 6. Using the "same or lower number rule", we find the pointer on the dial to the right is between 1 and 2, so we read the "million-foot" dial exactly as the number it is on or near, 6.

The entire meter reading is 6187.
