Be safe: Store flammable products away from gas or electric appliances

Flammable liquids like solvents, paint thinners, adhesives and gasoline make jobs around the house easier. But they can be deadly if their heavy fumes come in contact with even a small spark. Store flammable products away from ignition sources like water heaters, electric motors or switches.

Summer

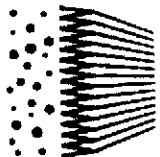

Save energy even when it's hot outside.

Newer dishwasher models are more energy-efficient than hand-washing. Run at night and let your dishes air dry to save more.

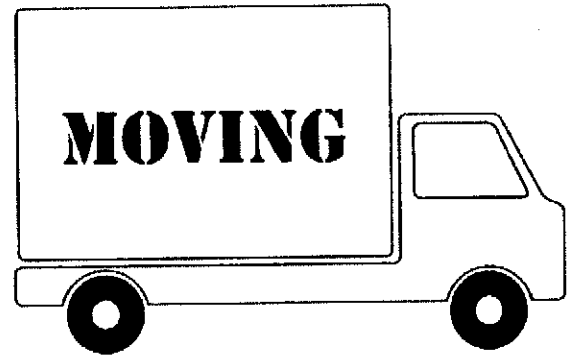

Keep your thermostat at 78 F when you're home and up to 85 F when the house will be empty for several hours.

Replace air-conditioner filters monthly to keep your system running at optimal efficiency.

A safety message from CenterPoint Energy

If you smell natural gas, leave immediately. Call our Gas Leak Hotline at 800-296-9815. Do not use or store flammable products such as gasoline in the same room or area near the water heater or any other gas appliance.

Si percibes un olor a gas natural, sal inmediatamente. Llama a nuestra línea telefónica para fugas de gas a uno de los números de teléfono que aparecen arriba. No use ni almacene productos inflamables tales como gasolina en la misma habitación o en áreas cercanas a un calentador de agua u otro tipo de aparato a gas.

How to read your meter

The following is an example of how to read a typical meter index.

Look at the four dials with their curved arrows. Read from right to left as follows:

1. Read the "thousand-foot" dial as 7, the last number that the pointer passed. Note that the curved arrow on the dial shows a clockwise movement of the pointer.
2. Read the next dial, the "10 thousand" dial. The curved arrow on the dial above shows a

counterclockwise direction. The pointer is near the 9, but to be sure whether to read it as that number or the lower number 8, the previously mentioned "same or lower number rule" must be applied. Since the pointer in the "thousand-foot" dial to the right is nearer the 9 and the pointer has not reached the 0, the "10 thousand" dial should be read as 8.

3. Read the "100 thousand" dial, it seems to point to 2. Double-check by using the rule above. Since the pointer of the "10 thousand" dial is between 8 and 9, take the lower reading number, 1, for the "100 thousand" dial.

4. Read the left-most dial, the "million-foot" dial. The pointer is near the 6. Using the "same or lower number rule", we find the pointer on the dial to the right is between 1 and 2, so we read the "million-foot" dial exactly as the number it is on or near, 6.

The entire meter reading is 6187.
